<sup>\*</sup>Dissolved metal standards are calculated using equations published with the surface water standards (e.g., copper A&Wc acute standard:  $e^{(0.9422 [in(hardness)]-1.464)}$ . In these equations, hardness (expressed as CaCO<sub>3</sub>) does not exceed 400 mg/L; therefore, use 400 mg/L hardness if result is greater than 400 mg/L.

## **Narrative Water Quality Standards**

### **Narrative Surface Water Quality Standards**

R18-11-108 -- A surface water shall be free from pollutants in amounts or combinations that:

- C Settle to form bottom deposits that inhibit or prohibit the habitation, growth, or propagation of aquatic life or that impair recreational uses (bottom deposits standard);
- Cause objectionable odor in the area in which the surface water is located:
- Cause off-taste or odor in drinking water;
- Cause off-flavor in aquatic organisms or waterfowl;
- Are toxic to humans, animals, plants or other organisms (toxics standard):
- Cause the growth of algae or aquatic plants that inhibit or prohibit the habitation, growth, or propagation of other aquatic life or that impair recreational uses (narrative nutrient standard);
- Cause or contribute to a violation of an aquifer water quality standard prescribed in R18-11-405 or R18-11-406; or
- Change the color of the surface water from natural background levels of color.

A surface water shall be free from oil, grease, and other pollutants that float as debris, foam, or scum; or that cause a film or iridescent appearance on the surface of the water; or that cause a deposit on a shoreline, bank, or aquatic vegetation. The discharge of lubricating oil or gasoline associated with the normal operation of a recreational water-craft shall not be considered a violation of this narrative standard.

### **Narrative Aquifer Water Quality Standards**

#### R18-11-405:

- A discharge shall not cause a pollutant to be present in an aquifer classified for a drinking water protected use in a concentration which endangers human health.
- A discharge shall not cause or contribute to a violation of a water quality standard established for a navigable water of the state.
- A discharge shall not cause a pollutant to be present in an aquifer which impairs existing or reasonably foreseeable uses of water in an aquifer.
